SKILLS

Designed RESTful APIs, middleware, and role-based access control (RBAC) for authentication and authorization layers.

Implemented backend logic, APIs, and server configurations with Node.js and Express for scalable and secure applications.

Created and managed NoSQL databases with Mongoose, integrating advanced query handling and data validation for real-time apps.

Built multiple full-stack applications using Next.js with server-side rendering, API routes, and optimized performance for production.

Developed responsive, component-based UIs with React and Redux Toolkit, focusing on reusability and state management efficiency.

EDUCATION

Creative IT Institute

Diploma in Full Stack Web Development (MERN & Next.js)

January 2021 – July 2023

Learned and built real-world applications with React, Next.js, Node.js, Express, MongoDB, and Stripe.

EXPERIENCES

⚙️ Back End Engineer (2020-now)

Personal Project | Node.js, Express.js, MongoDB, Stripe API

January 2025 – Present

- Developed a complete backend system with Node.js and Express.js, handling authentication, routes, and business logic.
- Designed RESTful APIs for product CRUD operations, role-based permissions, and user management.
- Integrated Stripe for secure online payments and managed webhook events.
- Configured MongoDB with Mongoose for schema design, validation, and efficient query operations.
- Implemented NextAuth.js for Google, GitHub, and Email-password authentication.
- Built role-based access control (RBAC) for SuperAdmin, Admin, and User roles.

🧠 Frontend Developer

Personal Project | Next.js, React.js, Tailwind CSS

January 2025 – Present

- Responsibilities:
- Designed and developed dynamic, responsive user interfaces using Next.js and React.js.
- Implemented state management with Redux Toolkit & RTK Query for seamless user experience.
- Built reusable and scalable UI components with Tailwind CSS and Headless UI.
- Integrated real-time product interactions including likes, comments, and star reviews.
- Collaborated UI with backend APIs ensuring smooth frontend-backend communication.
- Focused on optimizing performance, accessibility, and responsive design across all devices.
